< OVERVIEW

The Pro-Staple gun is a high quality underfloor heating staple gun that is used for fixing underfloor heating pipes to the insulation layer. The light weight and ergonomic design increases productivity by reducing blockages and reload times. The 40mm & 60mm Pro staple magazine has been specifically designed for fast staple loading with a magazine of 180 staples that can be loaded quickly. The staples come in a bulk box of a 3600pcs (20 Magazines) in 40mm or a bulk box of 2880pcs (16 magazines) in 60mm. Alternatively the 40mm 300 box or 60mm 600 box of heat welded staples are ideal for smaller projects. The design of the staple barbs allows for a smaller staple to be used as the gripping force is greater.
